PRESCRIPTIVE ANALYTICS & SYSTEM DYNAMICS

France 2030: Navigating the Macroeconomic Trilemma

Engineered by Omolafe Favour Emmanuel

THE CORE CHALLENGE

The Macroeconomic Trilemma

Fiscal Compliance

Strict EU mandates require a budget deficit below 3.0%.

Social Stability

Aggressive austerity triggers nationwide labor strikes.

Economic Growth

Strikes shrink GDP, mathematically worsening the deficit percentage.

THE SIMULATION ENGINE

Modeling complex system dynamics.

Non-Linear Demographics

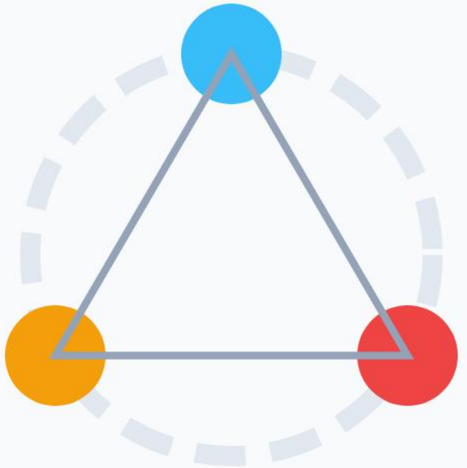

Pension savings compound dynamically as the population ages.

Monetary Vulnerability

ECB interest rate hikes accelerate domestic debt spirals.

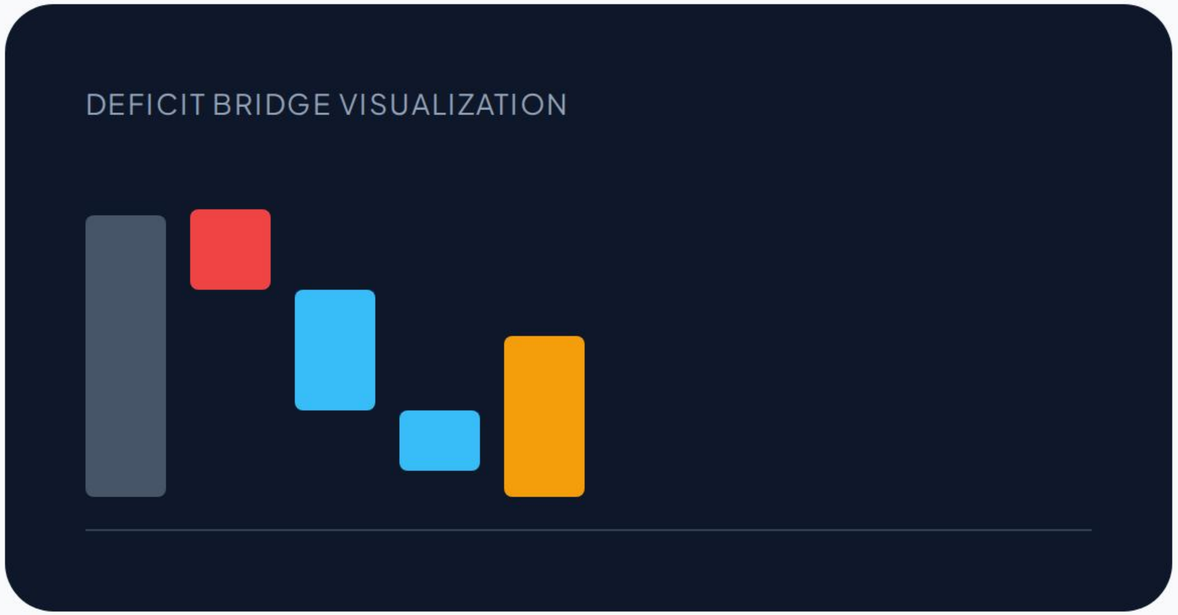

Capital Flight

Wealth taxes buy immediate social peace but penalize long-term investment.

EXECUTIVE DASHBOARD

Translating math into strategic clarity.

Waterfall Deficit Tracking

Visualizes the precise financial impact of individual policy levers.

Strike Risk Speedometers

Gamifies the breaking point of public tolerance in real-time.

PRESCRIPTIVE INTELLIGENCE

Moving from "What-If" to "How-To".

4,000+

Policy combinations.

The Auto-Solver Algorithm

Eliminates human trial-and-error.

Automatically prescribes the exact mathematical path to survive global crises.

THE BROADER IMPACT

The Strategic Value of Prescriptive Tools

De-Risking Strategy

Prevents self-destructive legislation by mathematically modeling downstream consequences before enactment.

Dynamic Resilience

Instantly adapts national roadmaps to absorb external shocks like energy shortages or central bank rate hikes.

Data-Driven Consensus

Transforms invisible economic forces into transparent visuals, aligning fragmented stakeholders around reality.
